

# Who Should Take this Course

Here, we outline the intended audience for this course.

We'll cover the following

- Intended Audience

## Intended Audience #

This course is designed for programmers who have never programmed in Dart and want to get started with Flutter.

We will teach you Dart from the ground up; going over everything you need to know to write a basic program assuming you have no prior knowledge of the language. The course will also go over programming concepts found in multiple languages. Some concepts you might already be familiar with, but we will assume that you aren't.

The course will end with a brief introduction to Flutter and help you set it up locally on your own machine.

We thank you for selecting this course and hope you have a great time learning Dart for Flutter!

---

Without further ado; let's get started.
