

Exercise: A Sum of Zero

Let's search for two numbers that have a sum of 0.

We'll cover the following ^

- Problem Statement
- Sample Input
- Sample Output
- Coding Challenge

Problem Statement

You must implement the `check_sum()` function which takes in a list and returns `True` if the sum of two numbers in the list is **zero**. If no such pair exists, return `False`.

10	-14	26	5	-3	13	-5
----	-----	----	---	----	----	----

The pair (5, -5) have
a sum of 0

10	-14	26	5	-3
----	-----	----	---	----

No such pair exists

Sample Input

```
[10, -14, 26, 5, -3, 13, -5]
```

Sample Output

```
True
```

Coding Challenge

Coding Challenge

We'll see in the future that there are several ways of approaching this problem. However, we urge you to try it with loops for now.

If you feel stuck, you can always refer to the solution review in the next lesson.

Good luck!

```
def check_sum(num_list):  
    pass # Replace with your code
```
