

# Test Your Knowledge 8

Let's take a small quiz!

We'll cover the following

- Quiz on Exception Handling

## Quiz on Exception Handling #

This Quiz will take maximum 10 minutes.

Steps for Exception handling are:

- anticipation
- detection
- resolution

Error handlers are specialized programs that solve errors.

\_\_\_\_\_ represents that a problem has occurred in the program and execution of the function halts.

An error message cautions users without terminating the execution of the program.

Choose the correct statement:

A try block is the block of code in which exceptions occur and a catch block catches and handles try block exceptions.

The parameter `finally` in the function `tryCatch()` is evaluated in the very beginning of the function.

The `warning()` function halts execution of the program if triggered.

9

What would be the value of the given expression?

```
log(-4.5)
```

10

We can suppress warnings using the `suppress()` function.
