

# Initiate a Live Chat With Someone

We have been making a chat application but so far have not actually chatted with anyone. Let's change that.

**We'll cover the following** ^

- Project URL
  - First Live Chat Message
- Share Your Project URL

## Project URL #

Open your app in the browser and, once prompted, supply your name.

## First Live Chat Message #

Go ahead and type in a message. Nobody is in your chat room (app) but they will be soon!

## Share Your Project URL #

Have a friend join by going to your project URL. They will also be prompted for their name. Once they add a message of their own you will be engaged in a real-time chat!

Hi, eric

[change name](#)

oksana  
hello

That was a short lesson, right? It's always refreshing when something is easy. In the next lesson, I cover setting up a custom domain that you can use to access your live site, in addition to your project URL.
