

Exercise 1: Variables

Let's try practicing the concepts and syntax we have learned so far.

We'll cover the following ^

- Problem Statement
 - Input
 - Output
 - Sample Input
 - Sample Output
 - Test Yourself

Problem Statement

- Print the high-level data type of the given variable.
- Print the low-level data type of the given variable.

Use two separate `cat()` statements to display text on the screen, one for high level and a second for low-level.

Input

A `testVariable` containing the variable being tested.

Output

The high-level and low-level data types of that variable.

Sample Input

```
1.9
```

Sample Output

```
numeric
```

Test Yourself

Write your code in the given area. If you get stuck, you can look at the solution.

```
# Write your code here  
cat(" ")
```

Let's have a look at the detailed solution overview of this exercise in the next lesson.
