

Challenge: Displaying Output

In this exercise, you will try printing text using the echo statement.

We'll cover the following ^

- Problem Statement

Problem Statement

Print this string using `echo`:

```
My name is Bond, James Bond!
```

Important Note: Please use only the above string in your solution code. If any other string is used, the test button will give a failed result.

Try using the `echo` statement yourself first before viewing the solution. Good luck!

```
echo "write your code here";  
//dont worry about the php tags
```

Now that you know the basics of PHP, let's learn about variables in the next chapter.
