

Final remarks

It's a wrap!

We'll cover the following

- Conclusion
- Feedback
- Automation courses by Ezify on Educative platform
 - Design a Test Automation Framework with Selenium and Java

Conclusion

These days, companies prefer to write API automation for their functional tests or business flows since they are faster, reliable, and stable. The lessons from this course will help you develop your backend automated sanity and regression suite skills in no time.

We at Educative hope this course has been a good learning experience for you.

Feedback

As always, your feedback, comments, concerns, and questions are always welcome! Drop us an email or post a comment on the community forum.

Automation courses by Ezify on Educative platform

[Design a Test Automation Framework with Selenium and Java](#) #

Testing the user interface for any application is generally time-consuming when done for each new release. UI test automation is the most common and effective way to simulate the actual user journey and business use-cases for any application.
