

Challenge: Appending an Element to a List

Test yourself and implement what you have learned so far in this challenge.

We'll cover the following

- Problem Statement
 - Input
 - Output
 - Sample Input
 - Sample Output
 - Test Yourself

Problem Statement

You are given a list of elements and you have to append an element to the list which is equivalent to the first element of the same list.

Input

The input is the List `list` to which you need to append an element.

`list` has already been declared for you.

Output

The output will be `finalList`.

Sample Input

```
("a","b","c")
```

Sample Output

```
("a","b","c","a")
```

Test Yourself

Write your code in the given area. Try the exercise by yourself first, but if you get stuck, the solution has been provided. Good luck!

This code requires the following environment variables to execute:

LANG

C.UTF-8

```
//Rewrite finalList  
val finalList = List(0,0,0,0)
```

Let's go over the solution review in the next lesson.
