

# Creating a Kubernetes Cluster with Jenkins X and Importing App

This lesson provides instructions for setting up a GKE Kubernetes cluster with Jenkins X.

## We'll cover the following

- Create a new cluster and install Jenkins X
- GKE

If you kept the cluster from the previous chapter, you can skip this section. Otherwise, we'll need to create a new Jenkins X cluster.

All the commands from this chapter are available in the [16-serverless-apps.sh](#) Gist.

## Create a new cluster and install Jenkins X #

For your convenience, the Gists from the previous chapter are available below, as well.

### GKE #

Create a new serverless **GKE** cluster:

[gke-jx-serverless.sh](#)

---

Now we are ready to work on creating the first serverless application using **Knative**.
