

Quiz

Let's take a quiz and review some of the material we covered in this chapter.

Using `jx create cluster` and `jx install` command contradicts which of the GitOps principles?

Which of the following tasks does Jenkins X Boot **not** perform?

The file that contains (almost) all the parameters that can be used to

customize the setup is `jx-requirements.yml`.

4

The questions that we answer while `jx boot` is executed help populate the `jx-requirements.yml` file.

5

After using `jx boot` if we check Namespaces using `kubectl get namespaces`, we do not see any Namespaces for staging and production environments. Why?

[Retake Quiz](#)

In the next chapter, we will learn about the methods of managing third-party applications in Jenkins X.
