

Challenge: Absolute Value

Test yourself and implement what you have learned so far in this challenge.

We'll cover the following

- Problem Statement
 - Input
 - Output
 - Sample Input
 - Sample Output
 - Test Yourself

Problem Statement

You need to create a function `absolute` which computes the absolute value of a given number.

Input

The input of the function is a number `x` of type `num` whose absolute value you want to compute.

Output

The output will be the absolute value of `x`.

Sample Input

```
-5
```

Sample Output

```
5
```

Test Yourself

Write your code in the given area. Try the exercise by yourself first, but if you get

Write your code in the given area. Try the exercise by yourself first, but if you get stuck, the solution has been provided. Good luck!

```
num absolute(num x) {  
    // Write your code here  
  
    return -1; // Remove this line after writing your code  
}
```

Let's go over the solution review in the next lesson.
