

# Quick Quiz on Functions

Solve a quick quiz to test your understanding of functions in PHP.

A function needs function definition to perform a specific task.

A local variable declared in a function is usable outside that function.

What is the value displayed at the end of the following recursive function?

```
<?php
function fun(int $n)
{
```

```
{
    if ($n == 4) return $n;
    else return 2*fun($n+1);
}
echo fun(2);

?>
```

4

What will be displayed when the following PHP code is executed:

```
<?php
function myFunc($value)
{
    echo "its value is: $value";
}
echo "x is a variable, ";
myFunc(4);
?>
```

What is the correct way to create a function in PHP?

[Retake Quiz](#)

Now that you know all about functions in PHP, let's move on to Strings in the next chapter.
