

Exercise 12: Creating Functions

Let's test your ability to create functions.

We'll cover the following

- Problem Statement
 - Input
 - Output
 - Sample Input
 - Sample Output
 - Test Yourself

Problem Statement

Implement a function `evenOdd` that takes a number as input and prints “even” when the number is even and “odd” when the number is odd.

Use the `cat()` function for printing!

Input

A `testVariable` containing the number to be tested.

Output

Print “even” or “odd” depending on the `testVariable`.

Sample Input

```
78
```

Sample Output

```
"even"
```

Test Yourself

Write your code in the given area. If you get stuck, you can look at the solution.

```
# Write your code here  
cat(" ")
```

In the next lesson, we have a solution review of this exercise.
