

# Challenge: Embed a Variable in a String

Test yourself and implement what you have learned so far in this challenge.

## We'll cover the following ^

- Problem Statement
  - Input
  - Output
  - Sample Input
  - Sample Output
  - Test Yourself

## Problem Statement #

You are given two variables `name` and `age` which store a person's name and age respectively. You have to embed `name` and `age` in a larger string and print the final string.

## Input #

The input is the variables `name` and `age`.

`name` and `age` have already been declared for you.

## Output #

The output will be the final string in which you will embed `name` and `age`.

## Sample Input #

```
"Ben", 18
```

## Sample Output #

```
"Ben is 18 years old."
```

Irrespective of the value of `name` and `age` . The format of the string should match the format of the sample output.

## Test Yourself #

Write your code in the given area. Try the exercise by yourself first, but if you get stuck, the solution has been provided. Good luck!

This code requires the following environment variables to execute:

LANG

C.UTF-8

```
//Write your code here
```

Hint 1 of 1

< Try using the `s` string interpolator.

>

Let's go over the solution review in the next lesson.
