

Summary

This lesson gives a quick overview of the concepts discussed in this course.

We'll cover the following

- Topics covered in the course

Topics covered in the course

The following topics were covered in this course:

- The use of `NumPy` for numerical data
- The use of `Pandas` for data analysis
- How to manipulate the data according to our needs
- The use of `matplotlib` and `seaborn` for statistical plots
- The basic statistics required to analyze predictive insights from various kinds of data
- The use of `selenium` for data scraping
- Two real-world projects extracting predictive insights from real data

In the next lesson, let's look at what new prospects are viable for you after completing this course.
