

# Challenge 1: Convert Double Value into Integer

Let's test your understanding by solving a simple challenge.

## We'll cover the following ^

- Problem statement
- Input
- Output
- Coding exercise

## Problem statement #

In this challenge, your task is to convert the variable value from `double` into an `int`.

## Input #

We have already initialized the variable `double_value` at the backend.

```
double double_value = 70.986;
```

## Output #

`int_value` should store the required output.

```
int_value = 70
```

 Please use the variables `double_value` and `int_value`; otherwise, your code will not pass the test case.

## Coding exercise #

Before diving directly into the solution, first, try to solve it yourself, and then check if your code passes all the test cases. If you get stuck, you can always see the given solution.

solution.

Good Luck! 👍

```
// Write your code here
// We have already initialized the variable double_value at the back-end
// Convert the value of the variable double_value to integer
// Store your output in int_value
int int_value ;
```

Explicit conversion

🎉 Well done! If you have solved the problem, give yourself a pat on the back.

In case you are stuck, let's go over the solution review in the next lesson.
