

1.17 Conclusion

In this post, we learned some points of creating React components and composing them to create a front-end app through rebuilding [Tesla's Battery Range Calculator](#).

If you've followed along until now, then congratulations on getting a React app up and running.

In the next installment, we'll explore how to improve our state management with the [Redux](#) library. In the meantime, if you have any comments, suggestions, or corrections, please feel free to post them in the comments section.

Thanks for your feedback in advance.
