

Challenge: Reverse Sort

Try to sort in reverse order in a react app.

We'll cover the following

- Task

Task

The sort feature works, but the ordering only includes one direction. Implement a reverse sort when the button is clicked twice, so it becomes a toggle between normal (ascending) and reverse (descending) sort.

Optional Hints:

- Consider that reverse or normal sort could be just another state (e.g. `isReverse`) next to the `sortKey`.
- Set the new state in the `handleSort` handler based on the previous sort.
- Use the new `isReverse` state for sorting the list with the sort function from the dictionary with the optionally applied `reverse()` function from JavaScript arrays.
