Challenge: Remember Last Searches

Try coding to remember last five searches to hit the API.

We'll cover the following ⌃

- Task

Task

Remember the last five search terms to hit the API, and provide a button to move quickly between searches. When the buttons are clicked, stories for the search term are fetched again.

Optional Hints:

- Don't use a new state for this feature. Instead, reuse the `url` state and `setUrl` state updater function to fetch stories from the API. Adapt them to multiple `urls` as state, and to set multiple `urls` with `setUrls`. The last URL from `urls` can be used to fetch the data, and the last five URLs from `urls` can be used to display the buttons.
