Quiz

Let's solve a quiz and review some of the material we covered in this chapter.

1 (!)   What is the default deployment strategy used by Jenkins X?

2 (!)   If you are not part of a self-sufficient team, should you be concerned about the deployment method?

3 (!)   Deployment is a process through which we would install new applications into our servers or update those that are already running with new releases.

4 Serverless deployments completely fulfill the responsiveness requirement.

5 Rollback feature does not exist with the `RollingUpdate` strategy.

6 Blue-green strategy is better than the `RollingUpdate` or serverless strategy.

7 Canary deployments are, in a way, an extension of rolling updates. As such, all of the requirements fulfilled by one are fulfilled by the other.

In the next chapter, we will be applying the GitOps principles to Jenkins X.
