# What Now?

This lesson concludes the discussion regarding this chapter and gives instructions to free up the used resources.

> **We'll cover the following**   ∧
>
> - How to free up the resources?

There are still quite a few other features related to the pull requests that we haven't explored. Specifically, we haven't looked at **GitChat**-related functionalities. The reason for that is technical. The type of Jenkins X installation we performed does not allow **GitChat**. We'll fix that later on. For now, you should have a solid base to deal with your pull request.

We're done with yet another chapter, and you are once again forced to decide whether to continue using the cluster or to destroy it.

How to free up the resources?

If the destruction is what you crave, you'll find the instructions at the bottom of the Gist you chose at the beginning of this chapter.

If you destroyed the cluster or you uninstalled Jenkins X, please remove the repositories and the local files we created. You can use the commands that follow for that.

> ⚠ Please replace `[...]` with your GitHub user before executing the commands that follows.

```
GH_USER=[...]

hub delete -y \
  $GH_USER/environment-jx-rocks-staging

hub delete -y \
  $GH_USER/environment-jx-rocks-production
```

```
rm -rf ~/.jx/environments/$GH_USER/environment-jx-rocks-*
```

In the next lesson, we will take a quiz and review some of the material we learned in this chapter.

```
rm -rf ~/.jx/environments/$GH_USER/environment-jx-rocks-*
```
