Quiz

This short quiz deals with complex data structures like arrays.

1

```
int arr[] = {4, 7, 10, 3, 19, 6, 5};
int res = arr[5] + arr[1];
printf("%d", res);
```

What would be the printed value for `res` ?

2

Given an array

```
int arr [20][20]
```

How would we set the 13th element of the 10th row to 300?

All the elements in a struct must have the same data type.
