Introduction

This section will shed light on some external libraries which can great enhance C's power.

Since C is such a "small" language, you must typically rely on libraries and APIs for complex tasks (unless you code them up yourself).

Here is a short list of some common libraries that you might find useful :

1. GLib
2. GNU Scientific Library
3. BLAS / LAPACK
4. Apophenia
5. GNUplot

We'll go through them one by one, starting with **GLib**.
