Challenge 1: Sum of two Numbers

Write a function to calculate the sum of two numbers.

Problem Statement

Write a PHP function `sum` that takes two integer parameters and returns their sum.

Input

two numbers

Output

sum of the two numbers

Sample Input

```
4, 5
```

Sample Output

```
9
```

Coding Exercise

Write your code in the code widget below. If you don't get it right, don't fret; the

solution is also given.

```php
<?php
  //write your code here
?>
```

In the next lesson, we will further our knowledge of functions by solving another challenge.
