Solution Review: Handling CSV file

In this review, we provide a detailed analysis of the solution to the problem.

Solution: Input/Output from File

main.r	All code files are copied to end of the page...
data.csv	

▷   💾   ↩   ⛶

Explanation

In the code snippet above, we first fetch the data of the `.csv` file in `csvData`.
> The data fetched from `read.csv()` is directly in the format of a **data frame**. Therefore, `csvData` is a data frame. Now, we can excess one of the columns `Item` using the syntax:

```
csvData$Item
```

We store this column in the variable `items` and then write on file `output/outData.csv`.

We have a quick quiz, in the next lesson, to test your concepts.

Code Files Content !!!
