# Conclusion

In this lesson, we'll wrap up what we learned in this course.

> **We'll cover the following** ⌃
>
> - Conclusion

## Conclusion #

This marks the end of the course. At this point, you should be confident enough to start writing ES6+ code in your applications and websites.

`JavaScript` is a language in constant evolution. Every year, new useful features are added to the specification.

Creating a course that could summarize all of the new additions has been a great challenge for me, but I'm very happy that you made it this far.

Now that you are up to speed with the ES2019 specification, you can try following the TC39 proposals to know what's coming next.

Feel free to reach out to me on Twitter for any feedback or questions.

---

I hope that you found this course useful. If that is the case, I suggest you follow my new website and my DevTo where I write articles about web development.

A special thanks to all the users on GitHub that made pull requests and opened issues to help fix mistakes and improve the quality of the book that became the base of this course.

A copy of the book is available at a special price for students of this course on Leanpub.

Thank you very much for your time and your support and happy coding!
