# Quiz

Let's take a quiz and review some of the material we learned in this chapter.

!	
1	Promotion to production is a technical decision.

!	
2	Who usually decides when to promote a release to production?

!	
3	Can we add integration tests when promoting a release?

4 ⚠ The `--env` flag given to `jx promote` represents the environment that we want to promote.

5 ⚠ The `--version` flag represents the version of the application that we want to promote.

6 ⚠ To improve deployments to production, we can add a HorizontalPodAutoscaler that will scale the application depending on memory and CPU consumption or based on custom metrics.

The next chapter will focus on how we can version the releases of applications using Jenkins X. Stay tuned!
