Quiz

Test your knowledge of conditional statements with this fun quiz!

1 An `if-elif-else` statement can only handle three outcomes.

2 What would be the value of `result` at the end of this code?

```
num1 = 10
num2 = 20
result = 4000

if (num1 > 50 or not num2 <= 5):
    result = num1 * num2
else:
    result = num1 + num2
```

3 An `elif` condition requires an `if` condition but not an `else` condition.

4 The condition in a conditional statement always returns a _____.
